

AIR-WELL SINK / Sinki Telaga Udara / 天井花岗岩铺面 7

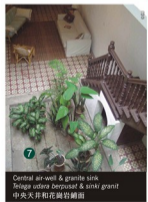

AIR-WELL and GRANITE SINK
The air-well allows hot air to escape and light to come into the centre of the house. Below the air-well is a granite sink, which catches the rainwater that flows to the front or back drain.

TELAGA UDARA dan SINKI GRANIT
Telaga udara membolehkan udara panas keluar dan cahaya masuk ke tengah rumah. Di bawah telaga udara adalah sinki granit yang memerangkap air hujan yang mengalir ke panit depan atau belakang.

天井和花岗岩铺面
天井有助于室内的散热和采光，天井的正下方下沉的花岗岩铺面可聚集雨水，再向前或向后排水溝流出。
